Marchesini BA50 horizontal intermittent-motion cartoner

The BA50 is a horizontal intermittent-motion cartoner, specifically designed to address the main cartoning applications for medium production rates. These machines are suitable for the pharmaceutical, cosmetic, food and consumer products industry. The machines are equipped with a bucket feeding chain into which, by means of dedicated feeders, are placed the products to be cartoned. Operation is completely automatic. One sensor checks for the presence of the product in the bucket and calls the correspondent carton and leaflet (if necessary), enabling the sensors of correct retrieval. Carton erection is carried out by the traditional blade opening system, which guarantees optimal operation with the widest range of cartons and cardboard. Change over is simple and fast, assisted by millimetric scales. The Siemens operator interface control panel shows all the machine functions and displays the machine status, as well as fault/alarm messages. The speed is set from the control panel and allows for adjustment to the optimal production speed. The construction is completely mechanical for minimum maintenance, assisted by an ample accessibility to all the parts.

Machine fitted with
Pre folded leaflet inserter
Coder
Reject Unit

Infeed units available from our stock for this machine are

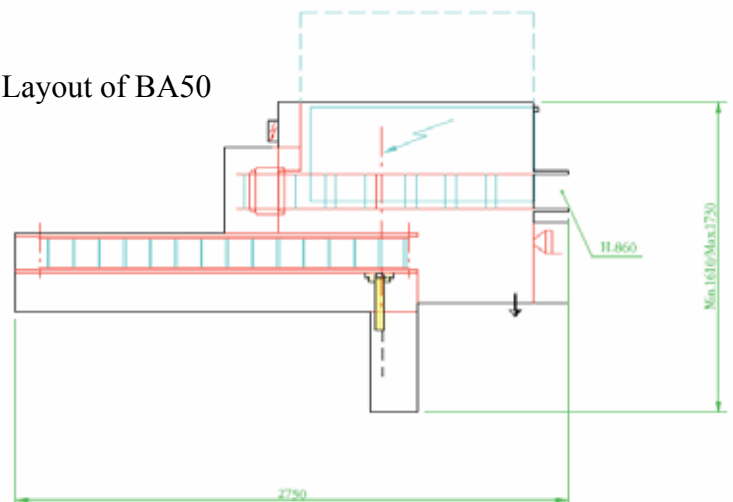

Sachet Feeder
Blister Feeder
Tube Feeder
Syringe Feeder
Year of Manufacture 1997

Very good condition
Full manuals available

Size range A (mm) = 40 - 140
B (mm) = 20 - 100
C (mm) = 70 - 190
